

## Video

Philco H3407C (circa 1958)

***Never before have I witnessed compressed into a single device so much ingenuity, so much brain power, so much development, and such phenomenal results***

**David Sarnoff**

## Topics

---

Film and television

Frequency modulation

Color television (NTSC)

HDTV

MPEG-2

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Motion Picture Camera

---

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Motion Picture Formats

---

Television	4:3
HDTV	16:9
35mm	3:2
Panavision	2.35:1 (2:1 anamorphic)
Vistavision	2.35:1 (1.5:1 anamorphic)

Television is 30 Hz

Film is 24 Hz

Difficult to convert frame rates (3:2 pulldown)

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Mechanical Television (Nipkow Disk)

---

**Mechanical Television, Concept by Paul Nipkow, 1884  
Invented and deployed by John Baird in 1933**

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Single Pixel Camera - Compressed Sensing

<http://www.dsp.ece.rice.edu/cs/cscamera/>

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## All-Electronic Television

Challenge was to develop the camera

Philo Farnsworth – solo inventor

Camera: Image Dissector

Vladimir Zworykin – RCA industrial research

Receiver: Kinescope (1929)

Camera: Iconoscope (1931), Orthicon (1933)

1933 World's Fair demonstration – 343 lines, 60 fields

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Raster Scan

**2D to 1D: Discrete in y, continuous in x**

**NTSC standard: 525 lines @ 30Hz, interlaced**

**For smooth animation, synchronize vertical refresh with swapbuffers**

**Animate on fields**

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Amplitude Modulation: Time Domain

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Amplitude Modulation - Freq. Domain

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Demodulation - Freq. Domain

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Spectrum Allocation

---

Channels are separated by 6 Mhz, 4.2Mz for signal

- Limits spatial resolution

### VHF

54-72 Mhz - Channels 2-4

76-88 Mhz - Channels 5-6

88-108 Mhz - FM Radio

124-216 Mhz - Channels 7-13

## Color Television

---

Separate signal into

- Luminance (Y)
- Chrominance (Y-R, Y-G)

## Spatial Frequency Response to Color

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Composite Video

$$V(t) = Y(t) + (Y(t) - R(t)) \cos(\omega_c t) + (Y(t) - G(t)) \sin(\omega_c t)$$

### Color subcarrier

$$f_c = 3.58 \text{ Mhz}$$

### Features:

- Signal compatible with black and white
- (Y-R) and (Y-G) has less bandwidth than
- Note: May get color aliasing!

## Background to HDTV

---

### Situation 1987

- Land-Mobile wanted unused broadcast spectrum; FCC decides in their favor
- Broadcasters invent HDTV scenario
- NHK demonstration of analog HDTV
  - Analog 1192:60
  - Satellite broadcast
  - Used 2 channels (8 Mhz)
- Reaction
  - Can't cede the technology to the Japanese
  - Can't go with an analog standard

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## ATSC

---

### FCC Advanced Television Standards Committee

#### Key competitors:

- Zenith and Bell Labs: 8-VSB and progressive
- General Instruments and MIT: digital (mpeg)
- Philips, Sarnoff (RCA), Thomson

#### 1993 Grand Alliance formed

#### 1996 Telecommunications Act

- 2002: commercial stations must begin digital broadcasts
- 2006: must eliminate analog (Balanced budget Act of 1997 delays this until 85% of TVs are digital)

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## 18(!) ATSC Formats

Name	Resolution (Pixels)	Progressive Interlaced (Hertz)	
4:3 aspect			
	640 x 480	60/30/24	30
	704 x 480	60/30/24	30
16:9 aspect			
SDTV	704 x 480	60/30/24	30
HDTV A	1280 x 720	60/30/24	
HDTV B	1920 x 1080	30/24	30

**Notes: Fox, ABC, ESPN use 720p, others 1080i**

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## MPEG-2

**Intra-pictures (I) - compressed as a single frame**

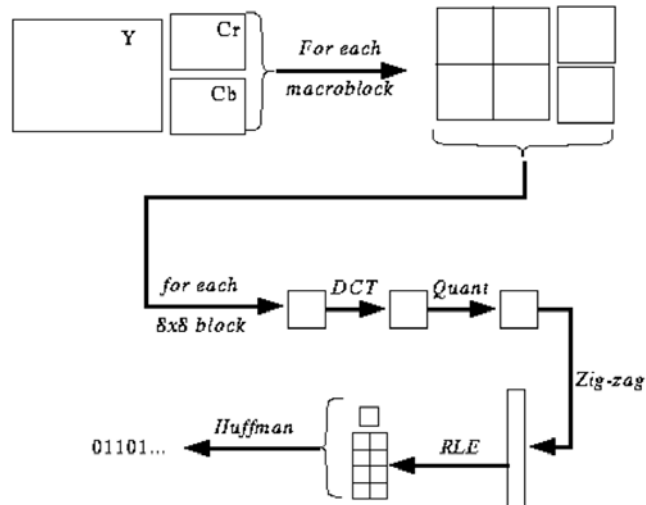

**Predicted-pictures (P) - compressed from previous P**

**Bidirectional-pictures (B) - compressed from pairs of I/P**

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## JPEG Compression (I-Frames)

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Motion Prediction (P and B Frames)

**Bottomline:**  
 DVB (broadcast) 5 Mbits/sec  
 DVD 9.8 Mbits/sec

CS148 Lecture 17

Pat Hanrahan, Winter 2007

## Summary

---

**HDTV just emerging**

- **HDTV broadcasts**
- **HD DVD formats (blu-ray)**

**Video on the internet is a hot topic**

- **youtube and the video ipod**

**Television uses many clever techniques**

- **Elaborate compression system based on motion prediction**
- **Spatial frequency response of human vision**
