The diagram illustrates the relationship between the percentage of pixels drawn and the time taken for different block patterns. The patterns compared are:

- **Block Pattern**
- **4x4 Block Pattern**
- **Random Pattern**

The diagram shows that the **Block Pattern** takes the longest time to complete, followed by the **4x4 Block Pattern** and then the **Random Pattern**. The time increases as the percentage of pixels drawn increases, with the **Block Pattern** showing the most significant rise at lower percentages.
