

Lecture #11: Wednesday, 14 February 2018
Topics: Project information

Project Information

Released: Wednesday, 21 February 2018

Due: Wednesday, 14 March 2018 by 9 pm (NO LATE DAYS)

Overview: The project includes a theory component and a programming component. Up to three people may work in a group for the project, and only one theory submission and one programming submission are required from each group. It is not necessary to complete the theory component before beginning the programming component, though it is recommended that you do so.

Environment: The project will be in Python and assumes basic programming proficiency. Starter code will be provided. Your code will be tested on the Rice servers— for information see <https://srcc.stanford.edu/farmshare2>.

Support: We will provide some tutorial materials regarding Python online and will also arrange a help session the week after the project is made available, either in the recitations or separately.
